

# Municipality of Mt. Lebanon Repeat Request Policy-Traffic Studies

## **1. PURPOSE OF GUIDELINE**

The purpose of this guideline is to establish a policy to determine when a particular intersection or neighborhood can be evaluated for traffic control changes, traffic calming, etc. if that intersection or neighborhood was recently studied.

## **2. REPEAT REQUEST / RE-EVALUATION POLICY**

An intersection or neighborhood that has recently been evaluated should not be considered for re-evaluation until a period of three (3) years has passed unless one of the following is true:

- A significant land development project has been completed within the past three years and resulted in changes to traffic patterns, or
- There has been an increase in crash frequency, or
- There are identifiable changes in traffic patterns as the result of a PennDOT project or a project in an adjacent municipality.

In the event that one of these conditions can be identified, the members of the Traffic Board can recommend the re-evaluation of an intersection or neighborhood that was studied within the past three (3) years.
